[Starred in Android](#)

[Freeman.jpg](#)

[Starred in Android.csv](#)

Data included

Contacts and contact photos you added yourself, as well as contacts saved from your interactions in Google products like Gmail.

Folder structure

Now that you've downloaded the contacts from your Google Account, you'll find folders named "My Contacts" and "All Contacts," plus additional folders if you created any labels, or starred contacts on your Android device. The "My Contacts" folder contains only those contacts you added yourself. The "All Contacts" folder contains both contacts you added yourself as well as contact info automatically saved from your interactions in Google products, like Gmail.

How to handle this export

If you downloaded your contacts as a CSV file, you can view them in a spreadsheet, or import them to Microsoft Outlook or another Google Account. If you downloaded your contacts as a vCard file, you can import them to another Google Account, Mac OS, iOS, or other contacts services.

You're in control of your data in Contacts

Review your data

You can review contacts you've added to your Google Account in Contacts

Manage your data

You can delete contacts from your Google Account in Contacts

Control your data

Go to Gmail settings to control whether contacts are created for auto-complete. Go to your Google Account to control whether contact info is saved when you interact with people in other Google products.

More options to manage your privacy

More options to manage your privacy

Google Account

Manage your info, privacy, and make Google work better for you

Below are all the possible formats you could have received in your archive:

Location History

Location data collected while opted-in to Location History.

JSON

The JSON Location History file describes device location signals and associated metadata collected while you were opted into Location History which you have not subsequently deleted.

- locations: All location records.
- timestampMs(int64): Timestamp (UTC) in milliseconds for the recorded location.
- latitudeE7(int32): The latitude value of the location in E7 format (degrees multiplied by 10^{**7} and rounded to the nearest integer).
- longitudeE7(int32): The longitude value of the location in E7 format (degrees multiplied by 10^{**7} and rounded to the nearest integer).
- accuracy(int32): Approximate location accuracy radius in meters.
- velocity(int32): Speed in meters per second.
- heading(int32): Degrees east of true north.
- altitude(int32): Meters above the WGS84 reference ellipsoid.

- [verticalAccuracy\(int32\): Vertical accuracy calculated in meters.](#)
- [activity: Information about the activity at the location.](#)
- [timestampMs\(int64\): Timestamp \(UTC\) in milliseconds for the recorded activity.](#)
- [type: Description of the activity type.](#)
- [confidence\(int32\): Confidence associated with the specified activity type.](#)

[KML](#)

A KML file stores [geographic modeling information in XML format that can be used to display geographic data. Refer to the kml documentation for more information.](#) You can load your KML file into [Google Earth to view all the locations you have visited.](#)

[Semantic Location History](#)

[Semantic location history consisting of inferred place visits and activity segments.](#)

[JSON](#)

[The JSON Semantic Location History file\(s\) describe Google Timeline objects such as inferred place visits and activity segments between place visits.](#)

[Data that are still in the process of being deleted are not included in your archive. Learn more about your deleted data.](#)

[All mail Including Spam and Trash.mbox](#)

[Data included](#)

[All of the messages and attachments in your Gmail account in MBOX format.](#)

[Folder structure](#)

[By default, we provide all of your mail in a single mbox file. Alternatively, you can choose labels to export, each of which will be contained in its own mbox file. When you export your mail from Gmail, each message's labels are preserved in a special X-Gmail-Labels header, in CSV format. While no mail client recognizes this header now, most mail clients allow for extensions to be written that could make use of this data.](#)

[How to handle this export](#)

[For more information about importing mboxs into your favorite mail client, here are some non-Google tutorials for Thunderbird and Apple Mail.](#)

[You're in control of your data in Mail](#)

[Review your data](#)

[You can review your mailbox in the Gmail UI.](#)

[Manage your data](#)
